## 1.2. Course description

NAME OF THE COURSE		MACHINE TOOLS AND SYSTEMS					
Code	FETM01	Year of study	1				
Course teacher	Dražen Bajić, Ph. D., Full Professor Sonja Jozić, Ph. D., Assistant Professor	Credits (ECTS)	5				
Associate teachers	Mario Veić, Teaching assistant	Type of instruction (number of hours)	L	S	AE	LE	DE
			30	0	0	30	0
Status of the course	Obligatory	Percentage of application of e-learning	0				
COURSE DESCRIPTION							
Course objectives	Training students for: <ul style="list-style-type: none"> <li>- understanding of basic machine tool parts, types of machine tools and their possible application.</li> <li>- acquisition of knowledge about the modern machine systems,</li> <li>- acquisition of knowledge of machine tools manual programming and programming in CAD/CAM systems for producing parts with simple and complex geometry.</li> </ul>						
Course enrolment requirements and entry competences required for the course	None						
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Students will be able to: <ul style="list-style-type: none"> <li>- present the principles of operation and application of machine tools</li> <li>- characterize features of machine tools</li> <li>- identify motives of high speed and multi-operation machine tools development</li> <li>- analyze the rule of CAD/CAM systems in modern design and production</li> <li>- generate the program for automatic machining on CNC machine tool</li> <li>- compare and highlight differences between manual programming and programming in CAD/CAM systems.</li> </ul>						
Course content broken down in detail by weekly class schedule (syllabus)	Course content		L or S hours	AE hours			
	Introduction to machine tools. State of the art and machine tools development. Classification of machine tools.		2				
	Basics of construction machine tools. Testing of machine tools accuracy.		2				
	Main parts of machine tools. Bearing elements, guides, spindle bearings.		2				
	Driving system of machine tools.		2				
	Machine tools control system.		2				
	Turning machines: Classification and basic concepts. Milling machines: Classification and basic concepts		2				
	Machine tools for drilling, broaching, sawing, grinding. Machines for gear wheels manufacturing.		2				
	First midterm exam						
	Automatic tool change. Automatic workpiece change.		2				
	Machine tools for high performance machining operation. Machining center. Turning center. Grinding center.		2				

	High Speed machine tools. Parallel kinematics for machine tools	2		
	Flexible manufacturing structures: flexible machining cells, flexible machining systems, flexible transfer lines.	2		
	Basic concept of CNC manual and automatic programming.	2		
	Examples of NC programming. Softwares for CAD/CAM	2		
	Second midterm exam			
	List of laboratory or design exercises		LE hours	
	Movement, typical parts and mechanisms of machine tools installed in the laboratory. Determination of degree of machine tool workspace efficiency.		2	
	Determination of gearbox efficiency on turning machine. Determination of efficiency		2	
	Determination of gearbox efficiency on drilling machine.		2	
	Testing of geometric accuracy lathes and drills. Influence of machine tool on the machining accuracy.		2	
	Manual programming: CNC turning machine		2	
	Manual programming: CNC turning machine		2	
	Manual programming: CNC turning machine		2	
	Rigidity of the system machine-tool-workpiece		2	
	Zero point of the workpiece and zero point of the tool at vertical machining center.		2	
	Automatic CNC programming in CATIA		2	
	Automatic CNC programming in CATIA		2	
Automatic CNC programming in CATIA		2		
Creation of CNC program for vertical machining center		2		
Format of instruction	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input type="checkbox"/> <i>on line</i> in entirety <input type="checkbox"/> partial e-learning <input type="checkbox"/> field work	<input checked="" type="checkbox"/> independent assignments <input checked="" type="checkbox"/> multimedia <input checked="" type="checkbox"/> laboratory <input type="checkbox"/> work with mentor <input type="checkbox"/> (other)		
Student responsibilities	The presence on lectures in the amount of at least 70 % of the times scheduled. Performed all required laboratory exercises.			
Screening student work (name the proportion of ECTS credits for each activity so that the total number of ECTS credits is equal to the ECTS value of the course)	Class attendance	2	Research	Practical training
	Experimental work		Report	Individual work
	Essay		Seminar essay	(Other)
	Tests		Oral exam	(Other)
	Written exam		Project	(Other)
Grading and evaluating student work in class and at the final exam	There are two midterms and final exams. The first midterm exam is after 7 weeks of lecturing and the second one is after the next 6 weeks. In the final exams students that did not pass the midterm exams take part. In the makeup exam students take the entire exam. The midterm, final and makeup exams are carried out as written tests. The requirements for passing grade is: <ol style="list-style-type: none"> <li>1. Positive assessment of programming task "Manual programming of CNC lathes"</li> <li>2. 50 % points on each midterm exam or the final exam.</li> </ol> Grade (in percentage) is formed according to the formula: $\text{Grade}(\%) = 0,2 L + 0,4 (M1 + M2)$ L – result of programming task "Manual programming of CNC lathes"			

	<p>M1, M2 – test results of first and second midterm exam.  Final grade is determined according to:</p> <table> <tr> <td>Percentage</td> <td>Grade</td> </tr> <tr> <td>50% do 61%</td> <td>sufficient (2)</td> </tr> <tr> <td>62% do 74%</td> <td>good (3)</td> </tr> <tr> <td>75% do 87%</td> <td>very good (4)</td> </tr> <tr> <td>88% do 100%</td> <td>excellent (5)</td> </tr> </table> <p>Examination terms: according to the timetable</p>			Percentage	Grade	50% do 61%	sufficient (2)	62% do 74%	good (3)	75% do 87%	very good (4)	88% do 100%	excellent (5)
Percentage	Grade												
50% do 61%	sufficient (2)												
62% do 74%	good (3)												
75% do 87%	very good (4)												
88% do 100%	excellent (5)												
Required literature (available in the library and via other media)	<b>Title</b>	<b>Number of copies in the library</b>	<b>Availability via other media</b>										
	Xun Xu: „Integrating Advanced Computer-Aided Design, Manufacturing, and Numerical Control: Principles and Implementations“, University of Auckland, New Zealand, 2009												
	Hoffmann M.: „CAD/CAM mit CATIA V5“, Hanser Verlag, Muenchen, 2005.												
	Lopez de Lacalle, Lamikiz "Machine tools for high performance machining", Springer, 2008.												
Optional literature (at the time of submission of study programme proposal)	<ul style="list-style-type: none"> <li>- Cebalo, R., "Alatni strojevi – Odabrana poglavlja", Vlastito izdanje, Zagreb, 2001.</li> <li>- Pahole, I., Balič, J., "Obdelovalni stroji", Univerza v Mariboru, Maribor 2003.</li> </ul>												
Quality assurance methods that ensure the acquisition of exit competences	<ul style="list-style-type: none"> <li>- Keeping records of class attendance</li> <li>- Evaluation of results in accordance with the above learning outcomes</li> <li>- Feedback from students via surveys</li> <li>- Self-evaluation of teachers</li> <li>- Feedback information from graduated students</li> </ul>												
Other (as the proposer wishes to add)													

NAME OF THE COURSE		COMPUTER AIDED DESIGN 2					
Code	FESM15	Year of study	1				
Course teacher	Gojko Magazinović, Ph. D., Full Professor	Credits (ECTS)	5				
Associate teachers	Ivan Pivac, Teaching assistant	Type of instruction (number of hours)	L	S	AE	LE	DE
			30	0	0	0	30
Status of the course	Obligatory	Percentage of application of e-learning	50				
COURSE DESCRIPTION							
Course objectives	Training students for: <ul style="list-style-type: none"> <li>- understanding the role and significance of CAD/CAE software in contemporary design and manufacturing systems,</li> <li>- performing engineering calculations using a spreadsheet software,</li> <li>- building geometric models, generating its technical drawings, and performing its static structural analyses using a contemporary CAD system.</li> </ul>						
Course enrolment requirements and entry competences required for the course	Completion of Computer Aided Design 1 course						
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Students will be able to: <ul style="list-style-type: none"> <li>- solve simple engineering problems by using a spreadsheet tool,</li> <li>- draw a graph by using a spreadsheet tool,</li> <li>- use a computer aided design and analysis tool,</li> <li>- generate geometric models and assemblies of moderate complexity,</li> <li>- link geometric models with spreadsheet analyses,</li> <li>- determine the peak stress and deformation within the simple geometric models.</li> </ul>						
Course content broken down in detail by weekly class schedule (syllabus)	Course content		L or S hours	AE hours			
	Introduction to a course. Description of an e-learning portal.		2				
	History of computing and computers; computer representation of numbers; engineering calculations; sample workbooks.		2				
	Graphical representation of engineering results.		2				
	Spreadsheet numerical integration.		2				
	Spreadsheet equation solver; systems of equations.		2				
	The environment of CAD software; references; design intent.		2				
	Curve and surface modeling.		2				
	First midterm exam						
	Feature parent-child relationship; model editing.		2				
	Model and section properties; measurements; material definition.		2				
	Degrees of freedom and assemblies; geometric tolerances; surface finishes.		2				
	Analysis as a feature; linking models and analysis.		2				
	Examples of models, analysis, and optimization.		2				
	Structural analysis: h-methods; p-methods; boundary conditions; result analysis.		2				
	Second midterm exam						
	List of laboratory or design exercises			LE or DE hours			
Spreadsheet tool elements; making a simple worksheet; built-in functions.			2				

	Absolute and relative cell addressing; complex expressions.	2				
	Working with data series; conditional formatting; graphing.	2				
	Numerical integration: trapezoidal and Simpson's rule.	2				
	Equations; linear systems; nonlinear systems.	2				
	Basic modeling; parameters; relations; Project, part I: simple parts.	2				
	Curves and surfaces.	2				
	Project, part II: advanced parts.	2				
	Project, part III: assembly.	2				
	Project, part IV: technical drawing.	2				
	Analysis feature.	2				
	Modeling, analysis, and optimization.	2				
	Static structural analysis of simple parts.	2				
Format of instruction	<input checked="" type="checkbox"/> lectures <input type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input type="checkbox"/> <i>on line</i> in entirety <input checked="" type="checkbox"/> partial e-learning <input type="checkbox"/> field work <input type="checkbox"/> independent assignments <input checked="" type="checkbox"/> multimedia <input checked="" type="checkbox"/> laboratory <input type="checkbox"/> work with mentor <input checked="" type="checkbox"/> computer work					
Student responsibilities	Attendance of at least 70% lectures and all design exercises.					
Screening student work ( <i>name the proportion of ECTS credits for each activity so that the total number of ECTS credits is equal to the ECTS value of the course</i> )	Class attendance	2	Research		Practical training	
	Experimental work		Report		Individual work	0,8
	Essay		Seminar essay		Computer work	2
	Tests	0,2	Oral exam		(Other)	
	Written exam		Project		(Other)	
Grading and evaluating student work in class and at the final exam	<p>There are two midterm exams during the semester (carried out by using computer and e-learning portal; 90 minutes duration; first exam: five theoretical questions, two numerical and one design problems; second exam: five theoretical questions and three design problems). The final exams attend students that didn't pass the midterm exams. The requirements for passing grade are the fulfillment of student responsibilities and at least 50% points on each midterm exam or the final exam. Grade (in percentage) is determined as follows:</p> $\text{Grade}(\%) = (M1 + M2)/2$ <p>where M1 and M2 are the midterm grades. The final grades are: satisfactory (2), grades from 50% to 61%; good (3), grades from 62% to 74%; very good (4), grades from 75% to 87%; and excellent (5), grades from 88% to 100%.</p>

Quality assurance methods that ensure the acquisition of exit competences	<ul style="list-style-type: none"> <li>- Evaluation of results by the above learning outcomes</li> <li>- Feedback from students via surveys</li> <li>- Institutional and non-institutional evaluations</li> </ul>
Other (as the proposer wishes to add)	

NAME OF THE COURSE		OPTIMIZATION METHODS 2					
Code	FESM05	Year of study	1				
Course teacher	Damir Vučina, Ph. D., Full Professor	Credits (ECTS)	5				
Associate teachers	Igor Peh nec, Ph. D., Teaching assistant Ivo Marinić- Kragić, Teaching assistant	Type of instruction (number of hours)	L	S	AE	LE	DE
			45	0	0	15	0
Status of the course	Obligatory	Percentage of application of e-learning	0				
COURSE DESCRIPTION							
Course objectives	<p>Acquiring theoretical know-how in basic numerical methods and algorithms in engineering optimization.</p> <p>Developing competences in applying computers in engineering numerical optimization.</p> <p>Acquire competences in applying numerical tools in engineering problems.</p>						
Course enrolment requirements and entry competences required for the course	Completed pre-graduate studies which include courses equivalent to computer-aided analysis. Competences in basic engineering analysis methods and program development in MATLAB						
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	<p>After completing the course the students will be able to:</p> <ul style="list-style-type: none"> <li>- formulate the engineering problem as an engineering problem of decision making</li> <li>- model the set of decision variables, constraints and excellence functions for engineering problems</li> <li>- make flowcharts for different optimization methods</li> <li>- apply gradient optimization methods (HJ, NM) to engineering problems</li> <li>- apply non-gradient optimization methods (SD, CG, N, BFGS) to engineering problems</li> <li>- solve nonlinear optimization problems with constraints</li> <li>- apply evolutionary optimization methods and metaheuristics (GA; ACO, SA, NN) to engineering problems</li> <li>- apply optimization methods to network problems: min. path, min. spanning tree, max. flow, ..</li> <li>- develop and test own optimization models and methods in MATLAB</li> </ul>						

	Course content	L hours	AE hours	
	Course content broken down in detail by weekly class schedule (syllabus)	Introduction, basic theoretical concepts. Basic terms and examples of application.	3	
Basic concepts, theoretical aspects, optimization models		3		
Linear programming, standard model		3		
Linear programming, simplex method		3		
Nonlinear programming, 1D methods: Interval halving, Fibonacci, Golden section, Interpolation methods, reduction of nD problems to 1D		3		
Nonlinear programming, n-dimensional methods for unconstrained problems: direct methods (Random search, Hooke-Jeeves, Powell, Nelder-Mead, other)		3		
Nonlinear programming, n-dimensional methods for unconstrained problems: gradient methods (Steepest descent, Conjugate directions method, Newton and Quasi-Newton methods)		3		
First midterm exam				
- Nonlinear programming, constrained n-dimensional method: transformation methods (external and internal penalty methods, other)		3		
- Nonlinear programming, constrained n-dimensional method: basic concepts in direct methods: (feasible directions, generalized reduced gradients, SLP, SQP,..)		3		
Basic concepts in evolutionary methods and special chapters: simulated annealing, genetic algorithms, etc.		3		
Basic concepts in evolutionary methods and special chapters: neural networks as approximators		3		
Basic concepts and procedures: optimization with discrete variables, branch and bound, GAs. Network problems shortest path, min. spanning tree, max. flow		3		
Examples of setting-up physical and mathematical models for optimization for different engineering problems. Development of algorithms. Development of programs in C and MATLAB.		3		
Second midterm exam				
List of laboratory exercises			LE hours	
Basic terms and examples of application.			1	
Optimization models			1

COURSE DESCRIPTION							
Course objectives	<ul style="list-style-type: none"> <li>- The promotion of quality as a fundamental criterion for survival companies in the market</li> <li>- Introducing students with modern principles, techniques and methods of quality assurance</li> <li>- Introducing students with the modern systems and principles of quality management.</li> </ul>						
Course enrolment requirements and entry competences required for the course	Completed <a href="#">undergraduate study</a> industrial engineering, shipbuilding <a href="#">or</a> mechanical engineering.						
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Students will be able to: <ul style="list-style-type: none"> <li>- Distinguish quality control, quality assurance and quality management</li> <li>- Construct a control charts for variables and control charts for attributes</li> <li>- Apply some sampling procedures for inspection by attributes and by variables</li> <li>- Assess the capability of process</li> <li>- Apply the some tools and methods of quality assurance</li> <li>- Explain the establishment and operation of a quality management system</li> <li>- Comment different quality management systems</li> <li>- Evaluate (teamwork) quality management system according to requirements of international standard ISO 9001</li> </ul>						
Course content broken down in detail by weekly class schedule (syllabus)	Course content			L hours	AE hours		
	INTRODUCTION: Definitions of quality. The historical development of quality. Traditional and <a href="#">modern</a> approach to quality. QUALITY LEVELS: quality control, quality assurance, quality management.			2	0		

	QUALITY AND LEGISLATION - Responsibility as a result of poor quality.					
	QUALITY COSTS					
	QUALITY AND RELIABILITY		2	2		
	QUALITY CONTROL: Internal and external quality control. On-line quality control and off-line quality control. Basic quality control tools		2	0		
	APPLICATION OF THE THEORY OF PROBABILITY AND STATISTICS IN THE QUALITY CONTROL.		2	3		
	STATISTICAL PROCESS CONTROL: Variation in process (special causes of variations and common causes of variations). Process capability analysis - process capability indexes		2	2		
	STATISTICAL PROCESS CONTROL: Control charts for variables. Control charts for attributes.		2	2		
	STATISTICAL QUALITY CONTROL: Acceptance sampling by attributes and by variables.		2	2		
	First midterm exam					
	QUALITY ASSURANCE.		3	2		
	QUALITY ASSURANCE: Taguchi method. QFD method.					
	QUALITY MANAGEMENT: Seven Management and Planning Tools (7QMT). FMEA method. Six-Sigma.		2	0		
	QUALITY MANAGEMENT: Quality and standardization. Standard ISO 9000. Requirements of this International Standard ISO 9001.		2	0		
	QUALITY MANAGEMENT: The establishment of quality management systems - Requirements that a company <b>must fulfill</b> . Preparing the necessary documentation. The application of the quality management system		2	0		
	QUALITY MANAGEMENT: Internal audit of quality management system. Management review of quality management system. External audit of quality management system conducted by external independent auditing organization.		3	0		
	Second midterm exam					
	List of laboratory exercises			LE hours		
	Measurement and control of physical quantities			3		
	FTA method			2		
	FMEA method			2		
QFD method			2			
5S			2			
Six sigma			2

NAME OF THE COURSE		RATIONAL USE OF ENERGY					
Code	FESM04	Year of study	1				
FESC06	Sandro Nižetić, Ph. D., Associate Professor	Credits (ECTS)	5				
Nižetić Sandro Ivan Tolj Dario Bezmalinović Grubišić-Čabo Filip	Ivan Tolj, Ph. D., Teaching assistant Dario Bezmalinović, Ph. D., Teaching assistant	Type of instruction (number of hours)	L	S	AE	LE	DE
			30	30	0	0	0
	Obligatory	Percentage of application of e-learning					
Obavezni							
Course objectives	Training students for: <ul style="list-style-type: none"> <li>- Classify and elaborate base terms related to the energy sustainability,</li> <li>- Implement general thermodynamic laws on different energy systems and components,</li> <li>- Classify and elaborate renewable energy sources</li> </ul>						
Course enrolment requirements and entry competences required for the course	Thermodynamics, Mathematics 1, Mathematics 2.						
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Students will be able to: <ul style="list-style-type: none"> <li>- Consider and clarify basic terms related to the sustainable energy development,</li> <li>- Describe and implement general thermodynamic laws on different energy systems and components in order to compute their efficiency,</li> <li>- Classify and describe unfavourable impacts to the environment due to energy related issues,</li> <li>- Classify and consider implementation of the renewable energy sources,</li> <li>- Determine and describe basic economic parameters related to the energy projects.</li> </ul>						
Course content broken down in detail by weekly class schedule (syllabus)	Course content		L or S hours		AE hours		
	Introduction to the process engineering's, basic terms and laws.		2 hours		2 hours		
	Calculation of the energy flows for different properties.		2 hours		2 hours		
	Calculation examples of energy flows for different plants.		2 hours		2 hours		
	Calculation examples of energy flows for different plants.		2 hours		2 hours		

	Enthalpy change and chemical reactions.		2 hours	2 hours		
	Calculation examples of energy flows for different combustion processes, exergy of fuels.		2 hours	2 hours		
	Energy balance equations and exergy analysis.		2 hours	2 hours		
	Exergy analysis.		2 hours	2 hours		
	Heat exchangers.		2 hours	2 hours		
	Pumps and fans in energy systems.		2 hours	2 hours		
	Heat pumps.		2 hours	2 hours		
	Cogeneration plants.		2 hours	2 hours		
	Rational use of renewable energy sources.		2 hours	2 hours		
	Rational use of renewable energy sources.		2 hours	2 hours		
	Economic analysis for energy related projects.		2 hours	2 hours

NAME OF THE COURSE		DESIGN FOR ASSEMBLY					
Code	FETL26	Year of study	2				
Course teacher	Nikola Gjeldum, Ph.D. Assistant Professor	Credits (ECTS)	5				
Associate teachers	Marina Crnjac, Teaching assistant, Ivan Peko, Teaching assistant	Type of instruction (number of hours)	L	S	AE	LE	DE
			30	0	0	0	30
Status of the course	Elective	Percentage of application of e-learning	0 %				
COURSE DESCRIPTION							
Course objectives	<p>Objectives:</p> <ul style="list-style-type: none"> <li>– Understanding and application of Design for Assembly basic principles</li> <li>– Teach students to design a product with its elements in Siemens NX CAD software</li> <li>– Teach student to design a product taking into account a simplicity and suitability of assembly process</li> </ul>						
Course enrolment requirements and entry competences required for the course	None						
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	<p>Students will be able to:</p> <ul style="list-style-type: none"> <li>– design a product elements in Siemens NX CAD software ("part design")</li> <li>– connect designed product elements in assembly ("assembly design")</li> <li>– generate designed product drawings ("drawing")</li> <li>– redesign a product according to assembly process requirements</li> <li>– make an assembly process plan for designed product</li> </ul>						
Course content broken down in detail by weekly class schedule (syllabus)	Course content					L hours	
	Introduction and basic principles. Historical development of product assembly process					2	
	Product architecture					2	
	Product design for assembly					2	
	Methods of product design for assembly					3	
	Measures and tolerances in assembly process					2	
	Product design modifications					1	
	Assembly process					2	
	First midterm exam					2	
	Making a plan for manual assembly process					2	
	Chart of assembly process traceability					2	
	Organizational structures in manual assembly process					2	
	Lean methods for assembly processes					2	
	Development from primary labor division phase to autonomous working groups					2	
	Balancing of assembly process workstations					2	
	Second midterm exam					2	
List of design exercises					DE hours		

	Introduction in Siemens NX CAD software		2											
	Part design in Siemens NX		8											
	Assembly design in Siemens NX		10											
	Generating product drawings in Siemens NX		4											
	Simulation in Siemens NX		2

NAME OF THE COURSE	TECHNICAL INNOVATIONS						
Code	FESL40	Year of study	1.				
Course teacher	Branko Klarin, Ph. D., Full Professor	Credits (ECTS)	5				
Associate teachers	Goran Gašparović, Teaching assistant	Type of instruction (number of hours)	L	S	AE	LE	DE
			30	0	30	0	0
Status of the course	Elective	Percentage of application of e-learning	0				
COURSE DESCRIPTION							
Course objectives	<p>Training students for:</p> <ul style="list-style-type: none"> <li>- acquire knowledge and understanding of the innovation processes,</li> <li>- application and analysis of procedures for the creative work of interest for technical applications,</li> <li>- evaluation procedures and intellectual property protection,</li> <li>- implement and lead the innovation process from idea to patent.</li> </ul>						
Course enrolment requirements and entry competences required for the course	English language						
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	<p>Students will be able to:</p> <ul style="list-style-type: none"> <li>- recognize the importance of innovation mainly technical, in the development of human society,</li> <li>- evaluate and self-evaluate of innovation potential,</li> <li>- recognize the importance of innovation in different technical fields,</li> <li>- appoint institutions and intellectual property organisations,</li> <li>- link and select the parameters important for innovation,</li> <li>- identify steps to innovate and design of project tasks,</li> <li>- connect various sources of ideas and design ideas, to design their own innovation,</li> <li>- recognize steps and design patent applications, create own patent applications.</li> </ul>						
Course content broken down in detail by weekly class schedule (syllabus)	Course content		L or S hours	AE hours			
	Introduction. Etymology and basic definitions. The history and role of invention and innovation.		2	2			
	Great explorers and inventors. Examples of the invention. The most significant inventions and innovations.		2	2			
	Innovative potential innovators. Basics for evaluation and self-assessment.		2	2			
	The implications of innovation in the research, management and policy. Indexation and the Global Innovation Index.		2	2			
	Institutions and intellectual property organization.		2	2			
	Basics for personal innovative work and membership in associations of innovators.		2	2			
	Innovation processes and outcomes.		2	2			
	Systematic innovation and design. The design spiral.		2	2			
	Association, diffusion of innovation, the S-curve and other features.		2	2			
	Eco-innovation and sustainability.		2	2			
	Review of the EU attitude and incentives to innovation. Open innovation.		2	2			
Legal aspects of intellectual property protection and realization.		2	2				

	Protected and protective symbols. Copyright, trademark, patent license.	2	2			
	List of laboratory or design exercises		LE or DE hours			
Format of instruction	<input checked="" type="checkbox"/> lectures <input checked="" type="checkbox"/> seminars and workshops <input checked="" type="checkbox"/> exercises <input type="checkbox"/> <i>on line</i> in entirety <input type="checkbox"/> partial e-learning <input checked="" type="checkbox"/> field work	<input type="checkbox"/> independent assignments <input checked="" type="checkbox"/> multimedia <input checked="" type="checkbox"/> laboratory <input type="checkbox"/> work with mentor <input type="checkbox"/> (other)				
Student responsibilities	The presence on lectures in the amount of at least 70 % of the times scheduled. Performed all required laboratory exercises.					
Screening student work (name the proportion of ECTS credits for each activity so that the total number of ECTS credits is equal to the ECTS value of the course)	Class attendance	3,5	Research		Practical training	
	Experimental work		Report		Individual work	
	Essay		Seminar essay	1,5	Laboratory exercises	
	Tests		Oral exam		Preparation for laboratory exercises	
	Written exam		Project		(Other)	
Grading and evaluating student work in class and at the final exam	There are two midterms and final exams. The first midterm exam is after 7 weeks of lecturing and the second one is after the next 6 weeks. Each midterm test consists of seminar essay progress. In the final exams students that did not pass the midterm exams take part. The final exams are carried out as finished seminar essay acceptance. The requirement for passing grade is the positive grade of seminar essay. Grade (in percentage) is formed according to the formula: $\text{Grade}(\%) = 0,5 (M1 + M2)$ where in percentage: <ul style="list-style-type: none"> <li>M1, M2 – seminar essay status.</li> </ul>
